Problem Statements

AVINYA 2K26 • AI Innovation Summit & Hackathon

8–9 October 2026 • IIT Kanpur

Technical Support by **UPAI Labs**

01

VyaparAI

AI Copilot for Indian MSMEs

PROBLEM

Small business owners handle invoices, bills, documents and compliance without a technical team, and decisions hidden in their own paperwork get missed.

CHALLENGE

Build an AI copilot that reads a business's own information and tells the owner what to do next.

02

Kisan Copilot

AI Decision Support for Farmers

PROBLEM

Agricultural decisions can depend on multiple pieces of information rather than a single question.

CHALLENGE

Build an AI assistant that combines a farmer profile with provided agricultural information and at least one additional data source.

EXAMPLE

Farmer profile + crop information + weather data → recommended actions

03

Shiksha Copilot

AI Learning System with Student Context

PROBLEM

Students need learning recommendations based on what they already know, rather than generic content.

CHALLENGE

Build a system that maintains a simple learner profile and creates an adaptive learning flow.

EXAMPLE

Assess → identify weak area → recommend content → generate exercise → evaluate answer

04

Seva Navigator

From “What is this?” to “What should I do next?”

PROBLEM

Government information is available, but citizens often struggle to understand the process they need to follow.

CHALLENGE

Build an AI assistant that converts a user’s situation into an actionable checklist.

EXAMPLE

“I want to apply for X. What do I need?”

05

BharatDoc

AI Document Intelligence for India

PROBLEM

Businesses and organizations deal with large amounts of semi-structured documents.

CHALLENGE

Build an application that processes a set of provided documents and converts them into useful structured information.

06

AccessAI

Making Digital Information More Accessible

PROBLEM

Language, literacy and accessibility barriers can make digital information difficult to use.

CHALLENGE

Build an AI interface that transforms complex digital information into an accessible experience for a specific user group.

07

SchemeMatch

Personalized Government Scheme Recommendation

PROBLEM

Simply listing government schemes isn't enough. Users need to understand which schemes are most relevant to them and why.

CHALLENGE

Build a recommendation system that uses user profile, scheme information and eligibility criteria to rank relevant schemes.

Submit or Choose Problem Statement

Problem Statement Selection Form

Scan the QR code to fill the form and choose one of the seven problem statements.
